

# How to Play CITY CAR DRIVING

**Would you make a good driver? Test your skills in this realistic simulator game! Here's how to play:**

## HOW TO START A NEW GAME

- Once you've opened the game, select the category of gameplay—free driving is the least restrictive of the options
- If you'd like, change the settings (change the area, increase traffic, etc.)
- Make sure that you've selected an automatic car, or else look online for instructions
- Press **"Go"**
- Once cars have appeared on screen, press **"B."** This is the seatbelt, and you always want to buckle up when you're in a car!
- Press the **Space Bar** to release the parking brake.
- Press and hold **"E"** to turn on the engine.
- Follow the instructions below on how to switch your direction—you need to change from parking (P) to drive (D) before you can drive!

## HOW TO SWITCH YOUR DIRECTION

You might crash a few times while playing, so it's important to know how to back up your car so it's easy to continue driving again.

Notice at the bottom right corner of the screen, there are letters and numbers: P, R, N, D, 3, 2, and 1. When your car is in "P," it's parked and not moving anywhere.

**To move down on that list of numbers** (to get from P to R, for example), press and hold: the **Down Arrow** and **"T,"** and then click **"W"** once per letter that you want to move down (moving from 3 to 1 would require you to press "W" twice).

**To move up on that list of numbers** (to get from D to R, for example), press and hold: the **Down Arrow** and **"T,"** and then click **"S"** once per letter that you want to move down (moving from D to R would require you to press "S" twice).

If you crashed and needed to back up, and you were in D (Drive), you would press and hold the down arrow and "T," and then click "S" twice.

# DRIVING

When you're driving, you'll either be in drive (most of the time) or reverse (when you need to back up). Here's how these two modes work:

## “D” – Drive

This is the gear that you will be in the most. When you want to drive normally, here are the controls:

- **Up Arrow:** accelerate and go straight
- **Down Arrow:** brake or slow down
- **Left Arrow:** go left
- **Right Arrow:** go right
- **“,” (Comma):** turn on/off left blinker
- **“.” (Period):** turn on/off right blinker
- **“H”:** honking sound
- **“C”:** switch camera angle

## “R” – Reverse

When you're in reverse mode, here are the controls:

- **Up Arrow:** move straight backwards
- **Down Arrow:** brake or slow down
- **Left Arrow:** go backwards left
- **Right Arrow:** go backwards right

If you want to switch back into driving, press and hold the down arrow and “T,” and then click “W” twice.
